

TR-7750U

UHF AM DIGITAL RADIO

www.jotron.com

Jotron 7000 Series

Excellent RF performance in congested areas Advanced digital signal processing (DSP) Remote control over Ethernet /RS232 /RS485 Easy set-up and control Compact Design In band signalling for PTT and squelch Continuous duty cycle Offset operation VoIP Start-up time <6 sec IP - seamless operation on all interfaces (mic, E&M and VoIP)

TR-7750U Transceiver

TA-7650U Transmitter

RA-7203U Receiver

Excellent RF performance in congested areas

Careful analogue design is the key issue to achieve the best collocation capabilities possible. The 7000 series of radios is designed with no compromises regarding the synthesizers and analogue front end. This together with a linear power amplifier design, strictly controlled by an ultra fast digital signal processor, makes the radio the ultimate choice for professional Ground to Air applications.

Advanced digital signal processing (DSP)

The receiver and transmitter use the most powerful digital signal processors to perform the intermediate frequency (IF) and the audio frequency (AF) filtering. In addition, all the modulation and demodulation tasks are performed in the signal processor. This means improved product control, less tuneable parts and improved reliability.

Remote control over Ethernet / RS232 / RS485

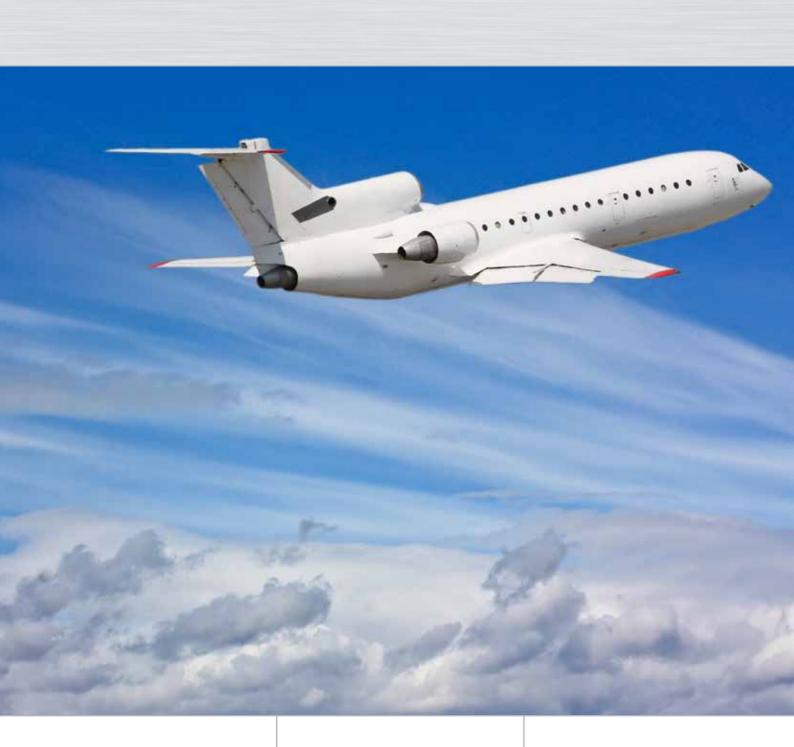

The radio units have alternative ways of being remotely controlled, making them easy to fit into an existing infrastructure already available on the site. The radio units are controlled using SNMP (Simple Network Management Protocol) over UDP (User Datagram Protocol), this together with interface makes it easy to control the radios. Either by using Jotron's dedicated Radio Access and Control System -RACS III or by a standard SNMP management application. Alternatively, setup and control may be done using either TCP/IP on the ethernet, or the RS232/RS485 ports. Built in web-server for historical and current status of the radios. Radio support DHCP and IPv6. The radios are also fully compliant with the ED-137 standard.

Easy set-up and control

All parameters can be set and adjusted electronically from the front panel or from the remote interface. The front panel contains a graphical display, menu buttons and switches that are used to set up the ra-

Compact Design

The receiver unit is a complete stand-alone receiver with built in power supply weighting only 1.8 kg. The transmitter unit weights only 3.8 kg. A complete transceiver consists of 3 units (transmitter, receiver and power supply) and the total weight is only 7.0 kg. The modular and compact design makes the radio the perfect choice for distant sites that are hard to

BITE system

The BITE system continuously monitors vital points in the radio units. An error is instantly detected and reported in multiple ways. The unique main/standby concept of the Jotron 7000 series can automatically switch the operation to a standby set upon an error, providing seamless communication for the user.

Keying options

Keying options available in the transmitter includes positive and negative voltages (up to 50V), keying to ground and phantom keying on the audio line. In addition the keying option includes in-band tone signalling with configurable tones for easy integration with any VCCS system.

Continuous duty cycle

The transmitter is designed for continuous duty cycle. This makes the radio the perfect choice for VOLMET and ATIS applications requiring continuous transmission. The unique cooling concept used on the transmitter, keeps the temperature low, and the operational lifetime of the equipment high.

Offset operation

Setting the offset carrier is just as easy as setting the frequency of the transmitter. Up to 4 carriers offset is available using the standard temperature controlled oscillator in the transmitter. 5 carrier offset available upon request.

Squelch options

The squelch system consist of a level and a noise compensated S/N squelch. Levels on both are adjustable which is useful in RF congested areas.

Squelch options on the receiver are flexible. Relay contacts with configurable logic and in-band signals are available.

Frequency range	General – All units	AM 25 kHz	AM 12,5 kHz	FM
